DETAILED ACTION

Allowable Subject Matter

1. Claims 1-2 and 7-12 are allowed.

Regarding Claims 1 and 2, Trompower, U.S. Patent No. 6,006,096, discloses a network cellular communication system wherein a mobile terminal communicates with a plurality of base stations, each base station with one or more omni-directional and/or directional antennas, said base stations connected to a host computer via a backbone, and wherein said base stations change the power level of signals transmitted to said mobile terminal in order to determine the location of said mobile terminal (Abstract, Column 2 Line 66 to Column 3 Line 14, Column 10 Lines 29-40, Figs. 1-4). Specifically, the base stations sweep 360 degrees (either mechanically or electrically with beam forming methods) to determine a cell that the mobile terminal is in, and reduce the transmission powers and receiver sensitivities in order to reduce the sizes of their respective coverage areas until the mobile terminal's location is determined to the best possible accuracy (Column 9 Line 43 to Column 10 Line 28, Fig. 2). The mobile terminal indicates that it has received signals from respective antennae of the various base stations by transmitting signals back to them, thereby providing Boolean reception data to the host computer for use in its determination of the mobile terminal's location (Figs. 8-10).

Trompower does not expressly disclose the determination of the position of the mobile terminal as viewed in a direction in which paired antennae are arrayed.

Application/Control Number: 09/941,732

Art Unit: 2617

Bachhuber et. al., U.S. Patent No. 6,087,987, discloses a radio system that allows the electronic key for a motor vehicle to be located (Abstract, Column 1 Line 66 to Column 2 Line 2). The electronic key is portable (Column 4 Lines 6-15, Figs. 1-2). The motor vehicle contains a set of transmitter/receivers that are coupled to a controller and that are stationary with respect to said motor vehicle and that engage in wireless communication with the electronic key (Column 3 Line 61 to Column 4 Line 1, Column 4 Lines 21-24, Fig. 1). The motor vehicle contains four antennae, coupled to respective transmitter/receivers, located in corners (Column 3 Lines 56-57, Column 6 Lines 20-23, Fig. 3). The transmitter/receivers transmit search signals that are received by the electronic key, and that causes said electronic key to transmit an identification signal back to the transmitter/receiver (Column 4 Lines 46-59); additionally, the electronic key can measure the received power levels of signals (such as search signals) sent from the transmitter/receivers and convert these measurements into location information (Column 5 Lines 15-20), and transmit this information back to the transmitter/receivers and thereby the controller (Column 5 Lines 31-34). Bachhuber et. al. discloses that the antennas have predetermined directional characteristics that are used by the controller in the computation of the location of the electronic key relative to these antennas (and thus, relative to the baseline vectors determined by the positions of the antennae pairs) (Column 6 Lines 13-18).

Neither Trompower nor Bachhuber et. al. expressly discloses the practice of varying the setting between transmission output powers of antennae, affixed to a

Application/Control Number: 09/941,732 Page 4

Art Unit: 2617

stationary device, among a plurality of relationships (one antenna's output power is greater than, equal to, or less than the output power of another antenna), or the signals from each antenna contain both an antenna identification code and a condition code. No reference was found that discloses this feature. Therefore, Claims 1 and 2 are allowable over the prior art.

Claims 7-12 depend on Claim 2, and are therefore also allowable over the prior art.

Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

- In Claim 1, Line 2, delete the words "that may be carried by a user"
- In Claim 2, Line 2, delete the words "that may be carried by a user"
- Renumber Claim 7 as Claim 3
- Renumber Claim 8 as Claim 4
- Renumber Claim 9 as Claim 5
- Renumber Claim 10 as Claim 6
- Renumber Claim 11 as Claim 7
- Renumber Claim 12 as Claim 8
